

Many local and state regulations now mandate public safety radio coverage inside of buildings as a prerequisite for occupancy. DuraComm's Public Safety, PS series power and battery backup enclosures provide the primary and backup power along with the alarms required to meet the NFPA 72 & 1221 code. Our engineering team includes NFPA certified experts that are familiar with regulations across the country. We work with you and your local AHJ to design and build a system that meets your requirements.

## Distributed Battery Backup

More suitable for DAS system with larger coverage area where RU are placed far apart

## Centralized Battery Backup

More suitable for DAS system with smaller coverage area
